

Z Flocc™ Polymer Products

Performance, profits, results ... Z Flocc™ is a complete line of the industry's highest quality polyacrylamide / polyacrylate based polymers that give you positive results and improve your position. Zeroday has developed a performance polymer product line that provides great solid-liquid separation, sludge/slurry consolidation and soil management operational results.

To capture a wide range of process opportunities, resolve issues, and optimize process and treatment programs, a broad spectrum of polymer chemistries are needed. Zeroday's extensive line incorporates all chemistries to meet any challenge:

- Charge type (cationic, nonionic, anionic, and amphoteric).
- Full range of % charge.
- Broad molecular weight range (chain length).
- Linear chained and branched.
- Polymer forms (dry, emulsion, solution).
- Polymer blends.

Flocculants and coagulants are core to Zeroday's business. Consequently Zeroday makes sure that the polymers incorporated into our Z Flocc line meet our rigorous, high value added standards.

Zeroday has developed Z ChemGear™ polymer makedown and feed systems to optimize our Z Flocc™ performance and results. In addition, we have incorporated other process and feed system offerings to maximize your polymer program performance and process capability.

Zeroday utilizes our wide ranging and successful experiences in selecting an optimum, high performance polymer program for you that that will provide optimum, reliable and consistent performance at minimum cost. Our support does not end after lab and plant qualification of a treatment program. Our efforts to ensure that you obtain the maximum economic and performance benefits from your Z Flocc™ program are ongoing and you can expect high quality and effective technical support from Zeroday.

Zeroday is very mindful that customers require a simple and easy ordering process and that a supplier can deliver products when required. Our standard is 100% supply assurance. We are proud of our great customer service record. We plan for success by anticipating your supply needs and develop plans to ensure your supply. Zeroday's liquid and emulsion polymers are supplied in pails, drums, totes and bulk. Dry flocculants are supplied in plastic pails, 55 lb. sacks and supersacks.

Please contact your local Zeroday sales representative or our office for further information on improving your process performance and treatment results.

Polymer Chemistries Available

Product Form	Polymer Charge Type		
	Cationic	Nonionic	Anionic
Dry Powder	X	X	X
Emulsion	X	X	X
Liquid	X	X	X
